
Common Instructional Strategies

These six common instructional strategies drive the instructional practice at University Park Campus School and have led to its success. They also act as the core of the professional development program offered by the University Park Campus Institute, a partnership between UPCS and Jobs for the Future. These strategies create classrooms that allow for powerful learning and powerful teaching and form the basis of a coherent college preparatory curriculum. They give all students of all skill levels access to the complex information needed to meet state and college-ready standards. These instructional strategies succeed because they engage all students in learning and require them to take an active role in their education.

Collaborative Group Work: Collaborative group work involves bringing students together in small groups for the common purpose of engaging in learning. Effective group work is well planned and strategic. Students are grouped intentionally with each student held accountable for contributing to the group work. Activities are designed so that students with diverse skill levels are supported as well as challenged by their peers. Collaborative group work uses questioning, scaffolding and classroom talk and centers literacy groups.

Writing to Learn: Writing to learn is a strategy through which students can develop their ideas, their critical thinking ability and their writing skills. Writing to learn enables students to experiment every day with written language and increase their fluency and mastery of written conventions. Writing to learn can also be used as formative assessment and as a way to scaffold mid- and high-stakes writing assignments and tests.

Literacy Groups: Literacy groups provide students with a collaborative structure for understanding a variety of texts and engaging in a higher level of discourse. Group roles traditionally drive literacy groups by giving each student a role to play and a defined purpose within the group. The specific roles or discussion guidelines may vary for different content areas, lengths of texts, or student level of sophistication using this strategy, but the purpose of literacy groups is to raise student engagement with texts by creating a structure within which they may do so.

Questioning: Questioning challenges students and teachers to use good questions as a way to open conversations and further intellectual inquiry. Effective questioning (by the teacher and by students) deepens classroom conversations and the level of discourse students apply to their work. Teachers use this strategy to create opportunities for students to investigate and analyze their thinking as well as the thinking of their peers and the authors that they read in each of their classes.

Scaffolding: Scaffolding helps students to connect prior knowledge and experience with new information. Teachers use this strategy to connect students with previous learning in a content area as well as with previous learning in an earlier grade. Scaffolding also helps facilitate thinking about a text by asking students to draw on their subjective experience and prior learning to make connections to new materials and ideas.

Classroom Talk: Classroom talk creates the space for students to articulate their thinking and strengthen their voice. Classroom talk takes place in pairs, in collaborative group work and as a whole class. As students become accustomed to talking in class, the teacher serves as a facilitator to engage students in higher levels of discourse. Classroom talk opens the space for questioning, effective scaffolding and successful collaborative group work and literacy groups.
